INTERIM REPORT

23rd JULY 2009 Update

SPAIN

Piroplasmosis (*Babesia caballi* and *Theileria equi*)

Endemic in Spain.

Equine Influenza (EI)

A mild outbreak was reported in May 2009, which was confirmed by Instituto Nacional de Investigaciones Agrarias, Madrid using serology and agent isolation. The outbreak was limited and clinically mild affecting five Thoroughbreds. Vaccinations for influenza and EHV had been given three months previously.

TURKEY

Piroplasmosis (*Babesia caballi* and *Theileria equi*)

An outbreak commenced on 20th May 2009 with the last case reported on 4th April. The confirming laboratory was Etlik VCR1 by serology and IFAT. The outbreak was limited and clinically mild affecting two Thoroughbreds at two premises.
